Practi-Packs™ for SimChart®

Wallcur and Elsevier are making simulation planning easier, more accurate and more realistic than ever with Practi-Packs™ for SimChart®.

SimChart is a fully web-based educational EHR that is designed for use in the classroom, simulation lab, and clinicals. It comes loaded with pre-built case scenarios to help students apply their understanding of electronic health records to realistic patient situations.

Combined with Wallcur’s 40 years of experience providing the healthcare industry with the highest quality, most true-to-life practice medications on the market, each of the 10 new SimChart medical-surgical, pediatric or women’s health case scenario packs comes complete with all of the Practi-Meds needed to create the most realistic lesson possible for students.

All Practi-Meds™ in the scenario packs contain scannable barcodes that are programmed directly into SimChart for convenience and accuracy.
