

Prescription for Success

Pre Course To Do List

1

Consider the Time Commitment you Expect from Students

This will guide you in choosing the best and most applicable learning opportunities for your students within Sherpath.

2

Make all Resources within Sherpath Available to Students

Even if you don't assign everything, make it visible to your students.

3

Get your Policies in Order

It is a best practice to have policies in place for Sherpath AI and HESI testing and remediation. Examples are available.

4

Introduce yourself (and your students!) to Sherpath AI

Sherpath AI provides evidence based answers at your fingertips, as well as case studies, topic outlines, and other engaging activities.

5

Familiarize Yourself with your Dashboards

Easily track your student's strengths and weaknesses, course progress, data analytics, and student engagement!

Prescription for Success

To Do List for Every Term

1

Utilize HESI Exams

These are an ideal way to test content knowledge throughout the nursing program and prepare your students for the NCLEX! Each course has 1-2 versions of a HESI Specialty Exam available.

Go through HESI Case Studies Together

2

These can be used as in class discussion activities, as part of a clinical post conference activity, or as a way to bring a real world patient scenario to skills lab. We recommend using these at least 3 times in each course.

3

Create NCLEX EAQs for Your Students to use to Practice

We recommend creating and assigning a 50 item Custom Quiz in the content area of focus for students to use as practice before the HESI Exam. Consider creating an additional custom quiz for extra practice!

Give Students a Digital Clinical Experience with Shadow Health

4

Use these assignments for synchronous or asynchronous learning, lab or clinical preparation, or for clinical hour replacement. These are a great way to help students get more out of clinical and classroom time!

Prescription for Success

Weekly To Do List

1

Incorporate an NGN Case Study into Class

You can use Sherpath, EAQ NCLEX, EAB, and text resources to find NGN cases, or create your own in EAB. Utilizing cases in this way allows students to work through the scenario in a low stakes way, while providing you with an opportunity to assess their critical thinking and clinical judgement skills.

2

Assign Sherpath Lessons

Assign 2-3 lessons per week. If you are covering many chapters in a week, assign 1 lesson per chapter. Prioritize lessons:

- from HESI focused chapters
- with Osmosis videos in them
- covering difficult concepts

3

Utilize Sherpath EAQs

Use both custom and mastery quizzing to cover all of your weekly content. Prioritize HESI focused chapters for mastery quizzing, and create a custom quiz to cover the rest of the content.
