Viewing Your Simulation Assignments

1. First, access Sherpath from your course.
2. At the top of the Home screen, your upcoming assignments will appear in list format. Click on the Simulation assignment due this week.
3. The Simulation title page contains the approximate time it will take to complete the assignment.

4. Click the PLAY arrow in the orange box to start the simulation.
5. The first page contains information relevant to the simulation, including the objective, a list of items the student will need to accomplish, the day and time in the simulated environment, and the background of the patient. Click **Continue** in the lower right to start the simulation.
6. Depending upon the Simulation’s objectives, you will be prompted by instructions at the top of the screen to interact with patients, the hospital environment, or other staff members. Following a prompt, choose from the available interactive menu items on the left. These menu items will vary by simulation.
7. The **Converse** button is used to interact with the patient or hospital staff by asking a series of chosen questions relevant to the activity. If a question is posed correctly, the simulation dialogue proceeds. If an incorrect question is chosen, a red sad face will appear, and rationale will explain why the question should not be posed at that time.
8. In some simulations, necessary equipment or information to complete a task will be collected with a drag and drop window. Dragging an incorrect item to the right pane will result in a red sad face with rationale appearing. You will only be able to proceed when the correct items have been added.
9. Simulations may also include Assessments, which contain a combination of interaction and observation to accurately document the records.

10. Click the **Complete Case** button when the assessment has been completed.
11. A window will pop-up asking if you wish to continue or return to the assessment. Click **Yes** to continue.
12. An **After Action Report** will appear. It will summarize the tasks to be accomplished in the Simulation, identify areas that were not completed correctly, and give you the option to click **Restart Simulation** in the upper left corner.

13. Once the Simulation has been correctly completed, click **CLOSE** in the upper right corner of the **After Action Report**.
